**IQM** **CINECA**

- Superconducting Digital Quantum Computer
- 54 qubits
- 90 couplers
- Delivery in Q4 2025

## Cineca to house Italy's most powerful quantum computer IQM Radiance 54

17/03/2025

🕒 3 min. read

- IQM Radiance 54-qubit full-stack superconducting quantum computer will be integrated into Leonardo, one of the world's fastest supercomputers in Bologna, Italy.
- Cineca intends to use the system for optimisation of quantum applications, quantum cryptography, quantum communication and artificial intelligence quantum algorithms.
- IQM Radiance 54-qubit quantum computer is scheduled for delivery and installation in Q4 2025. The system will be the first and most powerful on-prem quantum computer in Cineca.

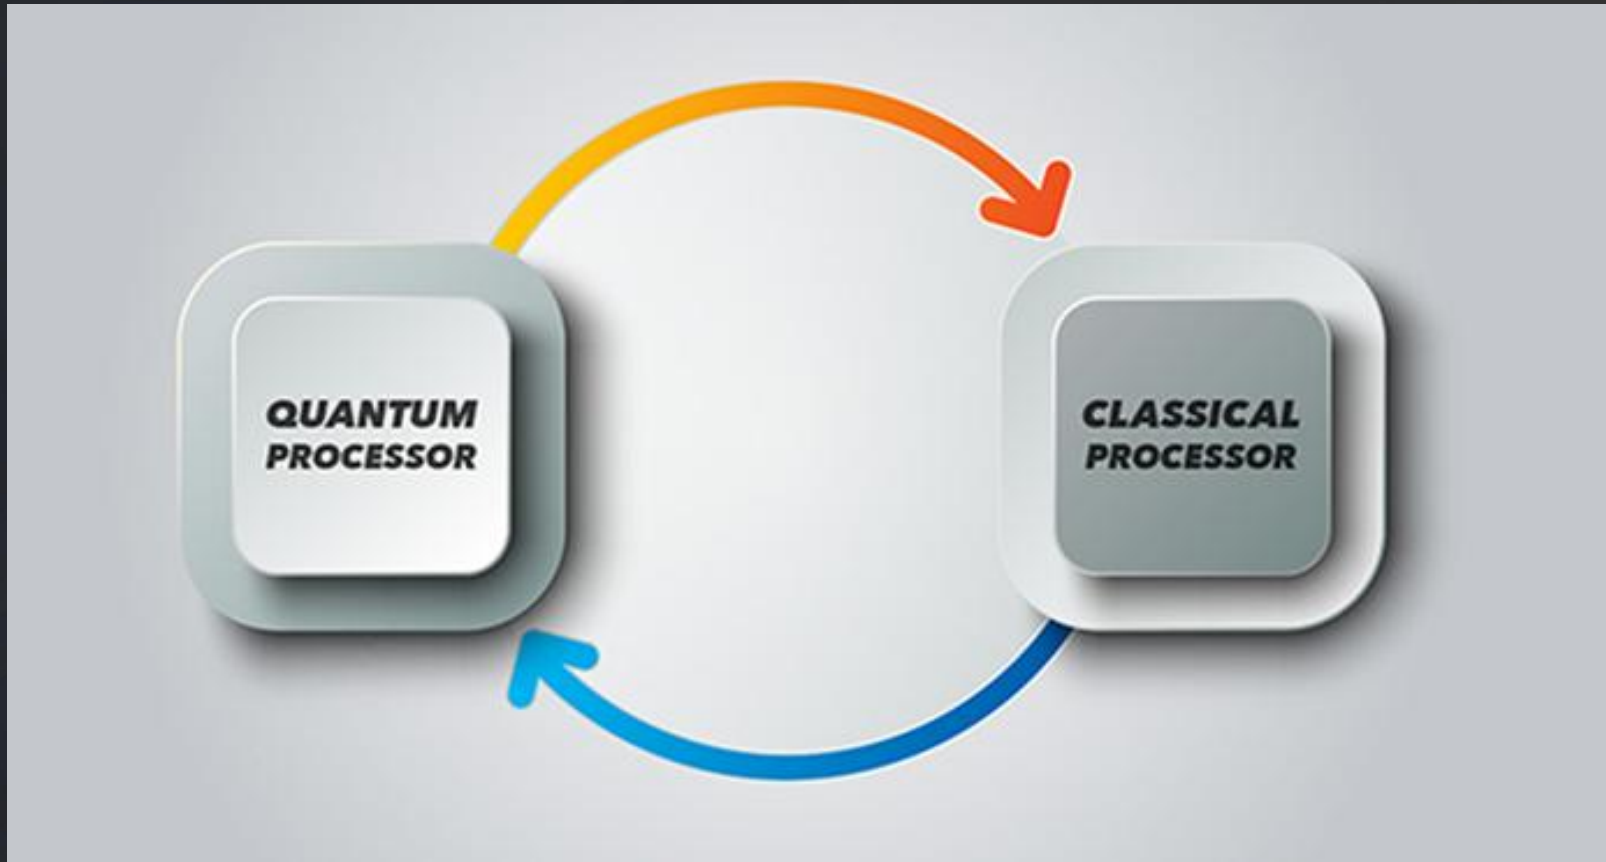

**CINECA**

# NISQ Quantum Computer

---

- Not able to run complex quantum computing algorithms
- Able to be used as HPC accelerators (like GPUs)

# Quantum Computing and Simulations

Neutral Atom devices can natively realize quantum spin Hamiltonians  
Digital superconducting devices can natively implement fast quantum algorithms

QUANTUM MATTER

NUCLEAR PHYSICS

MANY-BODY DYNAMICS

OPTIMIZATION

QUANTUM CHEMISTRY

MACHINE LEARNING

Quantum Machine  
Learning

Solving QUBO problems

Simulation of active site  
of proteins

# Quantum AI: a Two-Way Street

## AI for Quantum Computing

Key to scale up systems

- Automatic calibration of multiple parameters
- Reduce the overhead of error mitigation
- AI enhanced decoders and transpilers for error correction

## Quantum Computing for AI

Key to enhance certain tasks (forecasting, classification and generative) and to optimize training.

# On-Premise QC

Figure 2. Representation of different levels of integration of QC systems with classical systems (tight or loosely coupled)

ETP4HPC White Paper: < QC | HPC > Quantum for HPC → <https://www.etp4hpc.eu/white-papers.html#quantum>

# On-Premise QC

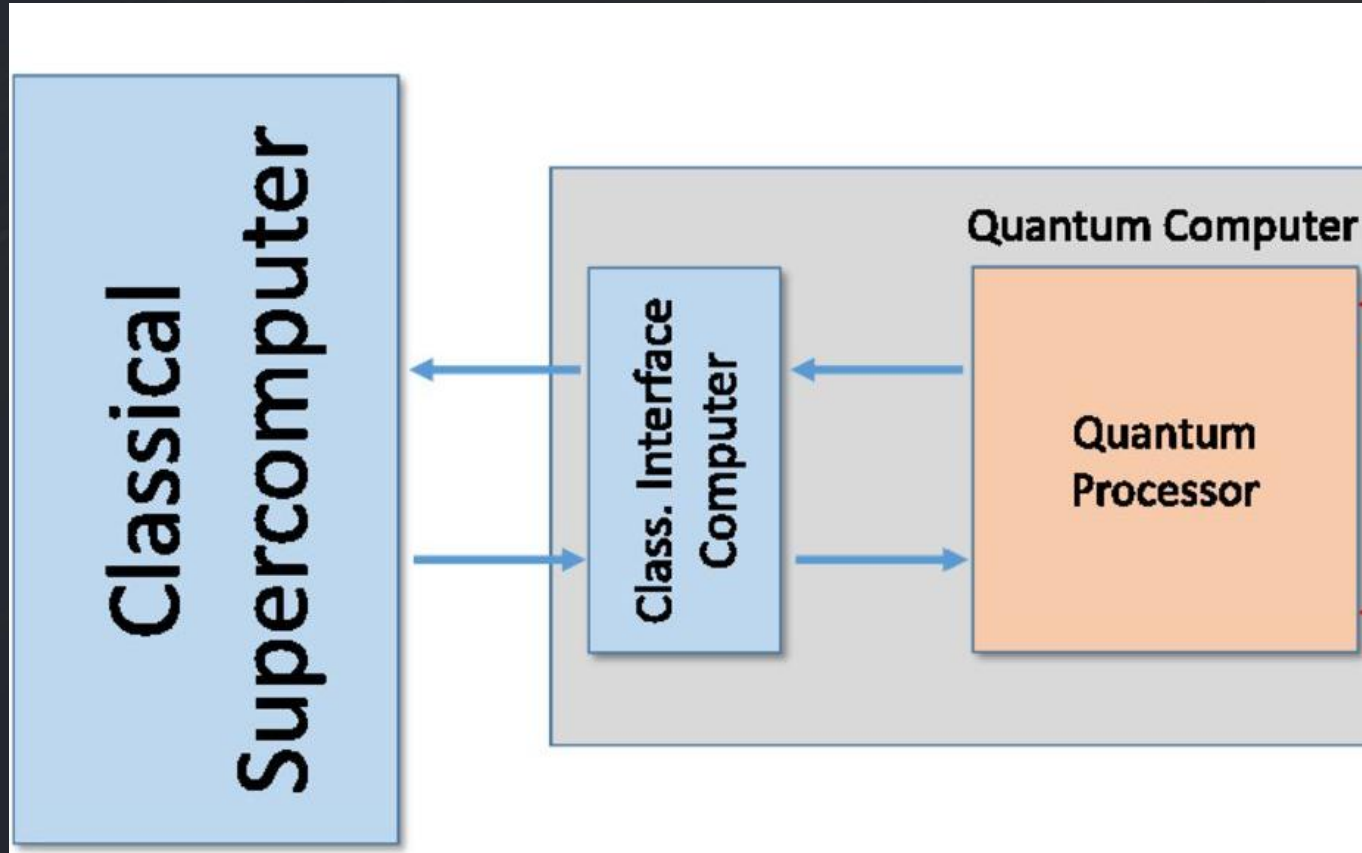

Figure 2. Representation of different levels of integration of QC systems with classical systems (tight or loosely coupled)

ETP4HPC White Paper: < QC | HPC > Quantum for HPC → <https://www.etp4hpc.eu/white-papers.html#quantum>

# The Hardware part

- Beginners: Connecting the qc to a node
  - A commercial qc usually is set up to be connected to a classic computer via an Ethernet cable – easy part!
- Advanced: Hijack the connection
  - To achieve a tighter connection and eliminate unnecessary latencies, one could also consider connecting the HPC node directly to the QPU (without going through the control computer present in the QC)
  - This means installing firmware and operating systems for the QC on the HPC node, making it a de facto control system for the QPU

# The Software part

- Beginners: Use the QC without HPC
  - Usually the vendors that produce QC also develop SDKs that can talk to the control computer and consequently to the QPU
  - Installing and using such software is step 0 for integration
- Advanced: Use the QC as a part of an HPC job
  - SDKs provided by vendors often do not include the use of MPI and/or CUDA to take advantage of HPC
  - One solution might be to explore existing software (Nvidia CUDA Quantum, Eviden Qaptiva etc.)
  - Or work with the vendor to write a custom SDK

# The Middleware part

Co-scheduling of hybrid jobs can excessively block quantum or classical resources

**EuroHPC**  
Joint Undertaking

The EuroHPC JU has selected six sites across the European Union to host and operate the first EuroHPC quantum computers in:

-  Czechia
-  France
-  Germany
-  Italy
-  Poland
-  Spain
